

## WORK INJURY EVALUATION AND MANAGEMENT

High Desert Industrial Medical Services utilizes a triage program to determine which patients will be sent immediately back to work with no lost time. All of these injuries need to be reported to your insurance carrier, which helps in the new reporting requirement to ensure compliance.

For workers who sustain “musculoligamentous” or soft tissue injuries, a return to modified duty as soon as possible is recommended. This helps the injured worker to remain active while preventing chronic complications. There are many ways to accomplish this, and many reasons for doing so. We can help you develop this program.

In the event of a more extensive soft tissue injury, a multidisciplinary approach is utilized. Our goal is to relieve the pain as quickly as possible, and stabilize the condition. A combination of medication, therapy, and rehabilitative exercises help to ensure injured workers are fit for duty as quickly as possible.
